Date: 12 August 2025

## **Subject: Change of Brake Caliper Specification – SAF Axles**

Effective from the 1st of September 2025, calipers supplied on SAF axles will be fitted with the with SBS 19 brake caliper as the standard specification.

This change has been initiated by WABCO ending production of the PAN19 caliper earlier in the year.

The SBS 19 is a proven, lightweight and robust braking solution. As part of SAF's ongoing commitment to product performance, it offers improved serviceability, with an ease of maintenance and reduced total cost of ownership.

It is important to note that due to stock rotation timings, there may be some axle models supplied with the old PAN19 caliper.

Change effective: 1st September 2025

Previous caliper: WABCO PAN 19

New caliper: SBS 19

**Important: The SBS19 caliper is not a replacement for the PAN19 caliper in service.**

The WABCO PAN19 caliper will still be available as an aftermarket spare part.

Spare parts, technical documentation and service training on the SBS 19 caliper will be available through our normal channels.

If you have any questions regarding this change or require further technical details, please contact our team at (09) 9807300 or [cs@transpecs.co.nz](mailto:cs@transpecs.co.nz)
